Grow your business with the most effective, reliable merchandising solution . . .

Bevmax3

BevMax3 is changing the way consumers feel about automated retailing. We're building confidence and creating convenience through more reliable operation, better merchandising techniques, more product selections, more capacity, faster delivery times and more capable payment systems.

**Substantial design improvements deliver Dependable Reliability**

**Introducing-** An enhanced product delivery process; Fail-safe ramp design; Elongated delivery cup with flat cup base and reduced "V" notch; X and Y motor covers; Shorter Y axis; Molded coin chutes; New control board software; Delivery port sensor relocated to the bottom; Compelling graphic design enhancements, and much more.

**FAIL-SAFE RAMP DESIGN**

In the unlikely event of a product falling to the bottom, the XY arm sweeps packages into a recessed well. The consumer receives their purchase, operation is uninterrupted.

Double-gate dispensing mechanism prevents bottles falling from trays (if the machine is rocked).

**Consumer-focused design delivers increased Sales Volume**

**2-3X faster vend speed.** Delivering products in less than 8-seconds means more people can be served during critical break periods. A smooth transfer from the shelf to the delivery cup reduces foaming.

**45 product selections.** Increasing 5 more products than competitors adds needed variety.

**360-unit capacity.** Holds 12-29% more product to ensure availability of consumer favorites.

**Superior merchandising.** 33% larger glass door provides a bigger viewing area for superior product displays. With shelving positioned 6-inches behind the glass, products are 50% closer.

**Convenient delivery port access...** means consumers won't need to stoop to receive purchased products.

**Functional conveniences deliver Increased Productivity**

Delivery routes are a daily grind...loading product, cash handling, equipment delivery. Only BevMax3 is designed to optimize labor productivity by simplifying routine tasks.

- Service monetary components without exposing refrigerated product to the environment.
- Easy access is provided to all regularly serviced monetary components (coin mech, bill validator, cash box).
- Glass display door opens 180° flush to allow placement in a vending bank or next to a wall.
- Faster loading time - service more machines, reduce OT, run fewer routes. Multiple-shaped packages can be quick-loaded in any vend position - no adjustments required.
- Cabinet design enables use of a pallet jack for delivery and installation.
- Cabinet fits through 34-inch doorways.
